Name
Enemax Enema Ready for use
READY-MADE ENEMA
Composition
Hypertonic solution of sodium phosphates

Each 100ml solution contains:
Monosodium Phosphate 16g
Disodium Phosphate 6g

Pharmacological properties
Enemax is classified as a saline laxative for the relief of constipation and effective rapid evacuation of the bowel.
Sodium phosphates are poorly absorbed from G.I.T., so they remain in the lumen of intestine retaining water in the lumen by their high osmotic pressure, physiologically stimulating the movement of large intestine, and thus producing rapid watery evacuation of the bowel.
Enemax induces complete emptying of the colon and rectum within few minutes.

Indications
Enemax is especially indicated when rapid, painless, and effortless evacuation of the bowel is needed in:
Cardiac patients and cardiac care units (CCUs)
Glaucoma and ophthalmic surgery when straining is catastrophic
Postoperative, especially in hernia operation
In all other cases which need evacuation where straining and pain are contraindicated

Enemax is also indicated for:

Medical indications
Rapid relief of constipation
Fecal mass impaction
Relief of barium impaction

Surgical indications
Preoperative preparation
Postoperative care
At the onset of labor

Diagnostic indications
Preparation for x-ray
Rapid preparation for rectal examination
Preparation for endoscopy (proctoscopy and sigmoidoscopy)
Double enema test in intestinal obstruction
Generally Enemax can be used with high safety as an enema and may be repeated more than once daily when needed

Not Intended For Oral Consumption

Storage
Store below 30° C.

How supplied
Handy disposable plastic bottle (with applicator) containing 120 ml.
