Name
VISCERALGINE 50 mg Film-coated tablets

Composition
Tiemonium methylsulfate 50 mg

Excipients

Pharmacological Properties
Tiemonium: mixed antispasmodic:
- musculotropic.
- anticholinergic (1/50th of the effect of atropine at identical molar concentration).

Pharmacokinetic Properties
Oral route: half-life of absorption: 36 min; apparent half-life of elimination: 3 h 24 min.
Maximum plasma concentration in 2 h, total excretion in 72 h (fecal excretion 70% in 72 h, urinary excretion 8% in 24 h; also by respiratory and cutaneous routes).

Indications
- Symptomatic treatment of pain related to functional disorders of the digestive tract and biliary system.
- Treatment of spasm and pain in the urinary tract and in gynecology.

Contraindications
Urethroprostatic disorders involving a risk of urine retention.
Risk of angle-closure glaucoma.

Warnings
Precautions for use:

- The results of animal studies of tiemonium did not reveal any teratogenic effects. Although these results do not prejudice the effects in man, no deformities have been reported up till now with normal use.
- In the absence of sufficient data, prudence should be the rule for nursing mothers although no problems have been reported with normal use.

Effects On Ability To Drive Vehicles Or Operate Machines:
None

Interactions With Drugs And Other Interactions:
None

Undesirable Effects:
None

Dosage and method of Administration
In adults the usual dosage is 2 to 6 tablets per day.
Note: the effect of oral form may be reinforced by administration of 1 or 2 suppositories/24 h.

Overdose
