Composition
Sugar-coated tablets:
Buscopan 10 mg and dipyrone 250 mg.

Ampoules of 5 ml.:
Buscopan 20 mg. and dipyrone 2.5 g.

Suppositories:
Buscopan 10 mg. and dipyrone 1 g.

Suppositories for Children:
Buscopan 7.5 mg. and dipyrone 300 mg.

Properties
Antispasmodic + Analgesic

Buscopan (Hyoscine - N- butylbromide) has a highly selective antispasmodic action on the smooth muscle of the gastro-intestinal, biliary and urogenital tracts. It has the great advantage that it is virtually devoid of the side-effects usually associated with drugs of the atropine series.

Buscopan Compositum is a combination of Buscopan with dipyrone (phenyl - dimethyl - pyrazolon - methylamino- methane sulfonate sodium). It is used for the relief of colic and severe spastic pain in conditions in which an analgesic as well as an antispasmodic effect is required. It is available in oral, parenteral and rectal forms of administration.

Indications for the use
Biliary colic, renal colic and other conditions of paroxysmal abdominal pain. Pain spastic conditions of the female genital system, dysmenorrhea.

Administration and dosage
Sugar-coated tablets: for oral administration to relieve spastic pain in disorders of the gastro-intestinal, renal, and female genital tracts, and also in dysmenorrhea.
- Dose: 1-2 tablets, if necessary 3 times a day until pain is relieved. The tablets should be swallowed whole.

Ampoules: In renal or biliary colic, or severe abdominal colic, 1 ampoule of 5 ml.
- Should be administrated, preferably by slow intravenous injection. If necessary it should be administrated 2-3 times daily at intervals of several hours. Should intravenous injection be impossible it may be injected deep into the buttock, but never subcutaneously.

Suppositories: To relieve spastic conditions of the gastro-intestinal and urogenital tracts, in dysmenorrhoea.
- Dose: 1 suppository, repeated it necessary every 2-4 hours. For maintenance therapy after parenteral administration of Buscopan compositum: 1 suppository 3 times a day.
Suppositories for children: For children over 12 months of age to relieve colic in the umbilical region, gastro-intestinal spasm, vomiting due to spasm and stomach ache of functional etiology.
- Dose: 1 childrens suppository 1-3 times a day

Children under 12 months of age should not be given Buscopan compositum, but only the plain Buscopan without dipyrone.

Contra-indications and precautions
Although dipyrone is a soluble and generally well tolerated aminopyrine derivative, as with all derivatives of this group, prolonged administration is inadvisable, particularly in patients with a history of drug allergy or blood dyscrasia.

Special instructions
With an intragluteal injection the following technique should be observed:
- Site of injection: only in the upper, outer quadrant of the buttock (gluteus maximus). - Direction: perpendicularly to the skin surface and directed toward the iliac crest.
- Depth: a long (and fine) needle should be used to ensure that the injection reaches the muscle.
